MORGAN HUNT

STAFF SOFTWARE ENGINEER

SUMMARY

Senior Software Engineer with 8+ years of experience building high-quality mobile applications, developer tools, and backend systems. Specialized in Flutter and Dart ecosystem with a strong focus on performance, developer experience, and clean architecture. Passionate about open source, automation, and building products that scale.

EXPERIENCE

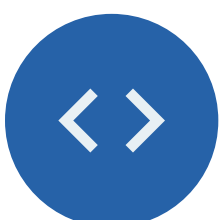

- Couchsurfing International**
STAFF SOFTWARE ENGINEER

Nov '23 - Present

 - Led and mentored a team of 9 mobile engineers, defining technical direction, engineering standards, and delivery processes for the mobile organization.
 - Architected and built Couchsurfing's Flutter application from the ground up, establishing a scalable foundation that supported rapid team growth and long-term product development.
 - Developed a type-safe code generation system that synchronized backend TypeScript contracts with Dart models and APIs, eliminating integration drift and reducing client/server defects.
 - Designed and implemented a fully automated CI/CD platform for iOS and Android, enabling multi-track deployments and reliable production releases multiple times per day.
 - Scaled and maintained a production mobile platform exceeding 1.3 million lines of code while preserving developer velocity, code quality, and application performance.
 - Established the mobile architecture, tooling, and development workflows that accelerated onboarding, improved engineering productivity, and enabled the mobile team to scale efficiently.
- Clean Simple Eats**
SENIOR SOFTWARE ENGINEER

Jan '20 - Jul '23

 - Served as the primary Flutter engineer for a large-scale meal-planning application, building and maintaining core mobile features.
 - Partnered with product, design, and leadership teams to deliver high-quality user experiences and support business objectives.
 - Helped coordinate cross-functional teams and drive successful releases across iOS and Android.

PROJECTS

OAT

Oat is a macOS application that helps developers manage shell aliases, functions, environment variables, and PATH entries through a simple GUI and CLI.

ZONAI (PENDING RELEASE)

A full-stack Dart backend framework with built-in auth, database, file storage, cron jobs, TUI and web dashboard — driven by a single file. (Inspired by Pocketbase)
